The Strategic Mid-Cap Strategy is a FTAWA proprietary investment model designed to identify and exploit seasonal influences on the U.S. equity market. Seasonal forces have historically skewed returns in certain months of the year, particularly during specific sub-periods in the final three months of the year. Each year, the Strategy holds an S&P Mid-Cap 400 Index ETF from late-October to the end of May, it then changes the holdings to intermediate-term bond ETF's from June to late-October. During the third and fourth quarters of each year, the Strategy increases the leverage exposure to the Mid-Cap market by 100% during certain sub-periods totaling less than twenty-five (25) days. The sub-periods are heavily influenced by end-of-month and holiday seasonal forces. Investors should be aware that the use of leverage in this Strategy potentially increases its risk and volatility and therefore may not be suitable for all investors.

Performance prior to 9/30/16 has been independently verified by Alpha Performance Verification Services. Please ask your financial advisors for a copy of the performance verification report.

Description

The Strategic Mid-Cap Strategy (SMC) is a strategy which seeks to exploit two seasonal influences on the stock market. These seasonal forces have historically "skewed" returns in certain months of the year and specific sub-periods in the final three months of the year. Each year, the SMC Strategy holds an S&P MidCap 400 Index ETF from late-October to the end of May and then invests in intermediate-term bond ETF's from June to late-October. During the third and fourth quarters of each year, the strategy raises the leverage of the midcap exposure by 100% during certain sub-periods totaling less than 25 days. These sub-periods are influenced by end-of-month and holiday seasonal forces.

Disclosure

Performance presented is hypothetical (back-tested). Prospective application of the methodology used to manage the strategy may not actually result in a performance commensurate with the hypothetical returns as shown. The hypothetical period does not necessarily correspond to the entire available history of the back-test or any individual instrument. The actual strategy invests in index and bond funds and/or ETF's which may be similar but different from the instruments used in the model. Model results have inherent limitations due to the fact that they do not reflect actual trading and may not reflect the impact that material economic and market factors might have had on the advisor's decision-making if actual client funds had been invested in the strategy. No matter how positive the model returns have been over any time period, the potential for loss is always present due to factors in the future which may not be account for in the model

The investment strategy that the results were based upon can theoretically be changed at any time with the benefit of hindsight in order to show better results. Therefore, hypothetical data must be approached with caution because it is constructed with hindsight and may not reflect material conditions that could affect a manager's decision process, thus altering the application of the discipline. There is no assurance that these results could, or would have been achieved by Financial & Tax Architects (FTA) during the periods presented.

Calculation Methodologies

The performance is prepared using the following methodologies: (i) by a hypothetical model portfolio to which an investment methodology is applied on a current and on-going basis; (ii) at the beginning of each annual period, the model begins with \$100,000 invested in exchange traded funds (iii) all securities are priced at month's end and all securities held are valued at the closing price as of the last business day for each month; (iv) the cost basis and proceeds for individual security purchases and sales are based on the day and time a trade was entered into and the price is recorded as of the time the decision was made; (v) on a monthly basis, performance is calculated using a holding-period return; (vi) annual performance for the model is computed by linking the monthly performance results for the indicated number of months; (vii) the total investment performance includes both realized and unrealized gains and losses, as well as dividends but does not take into consideration any interest on cash; (viii) all performance results are net of management fees; (ix) net of fee performance has been reduced by the management fee but is gross of all other fees and transaction costs; (x) net of fee performance is calculated using an annual management fee of 2.00% applied quarterly, in arrears; and (xi) the U.S. Dollar is the currency used to express performance.

Limitations of Hypothetical Model Performance

The performance represents hypothetical model results for STRATEGIC MID-CAP STRATEGY during the measurement time period. As such, these results have limitations, including, but not limited to, the following: (i) STRATEGIC MID-CAP STRATEGY results do not reflect actual trading by specific FINANCIAL AND TAX ARCHITECTS clients, but were achieved by means of the calculation methodologies described above; (ii) model performance may not reflect the impact that all or any material market or economic conditions would had on use of STRATEGIC MID-CAP STRATEGY by an individual client; (iii) for differing reasons FINANCIAL AND TAX ARCHITECTS clients would have experienced investment results, either positive or negative, during the measurement period that were or may have been materially different from those reflected by the STRATEGIC MID-CAP STRATEGY model performance. For Example, variances in client account holdings, investment management fees incurred, the date on which a client began using STRATEGIC MID-CAP STRATEGY, client account contributions or withdrawals and general market conditions, would have caused the performance of a specific client's portfolio to vary substantially from the STRATEGIC MID-CAP STRATEGY model performance results; and (iv) different types of investments and investment strategies involve varying levels of risk, and there can be no assurance that any specific investment or strategy will be either suitable or profitable for a prospective client.

The model performance does not reflect other earnings, brokerage commissions, and custodian expenses. It is important to note that actual portfolios would be charged other fees and transaction costs and performance would be lower. Hypothetical past performance is not indicative of future results. Therefore, no client should assume that future performance will be profitable, equal the hypothetical performance reflected for STRATEGIC MID-CAP STRATEGY, or equal the corresponding historical benchmark index. The historical index performance results for the index reflect reinvested dividends, but do not reflect the deduction of transaction and custodial charges, or the deduction of an advisor fee, the incurrence of which would have the effect of decreasing the historical index performance results. The historical index performance results are provided for comparison purposes only, so as to provide general information to assist a prospective client in determining whether the index performance meets the client's investment objectives. Historical index performance results do not reflect the impact of taxes. It should not be assumed that portfolios will correspond directly to any such comparative benchmark index. Further, the comparative index may be more or less volatile than STRATEGIC MID-CAP STRATEGY.

NEITHER HYPOTHETICAL NOR PAST PERFORMANCE IS INDICATIVE OF FUTURE PERFORMANCE
